Weighted horizontal magnetic gradient – WG_M – method

Korsós, M. B., et al. 2015, ApJL, 802, L21

Gradient of LoS magnetic field at Polarity Inversion Line

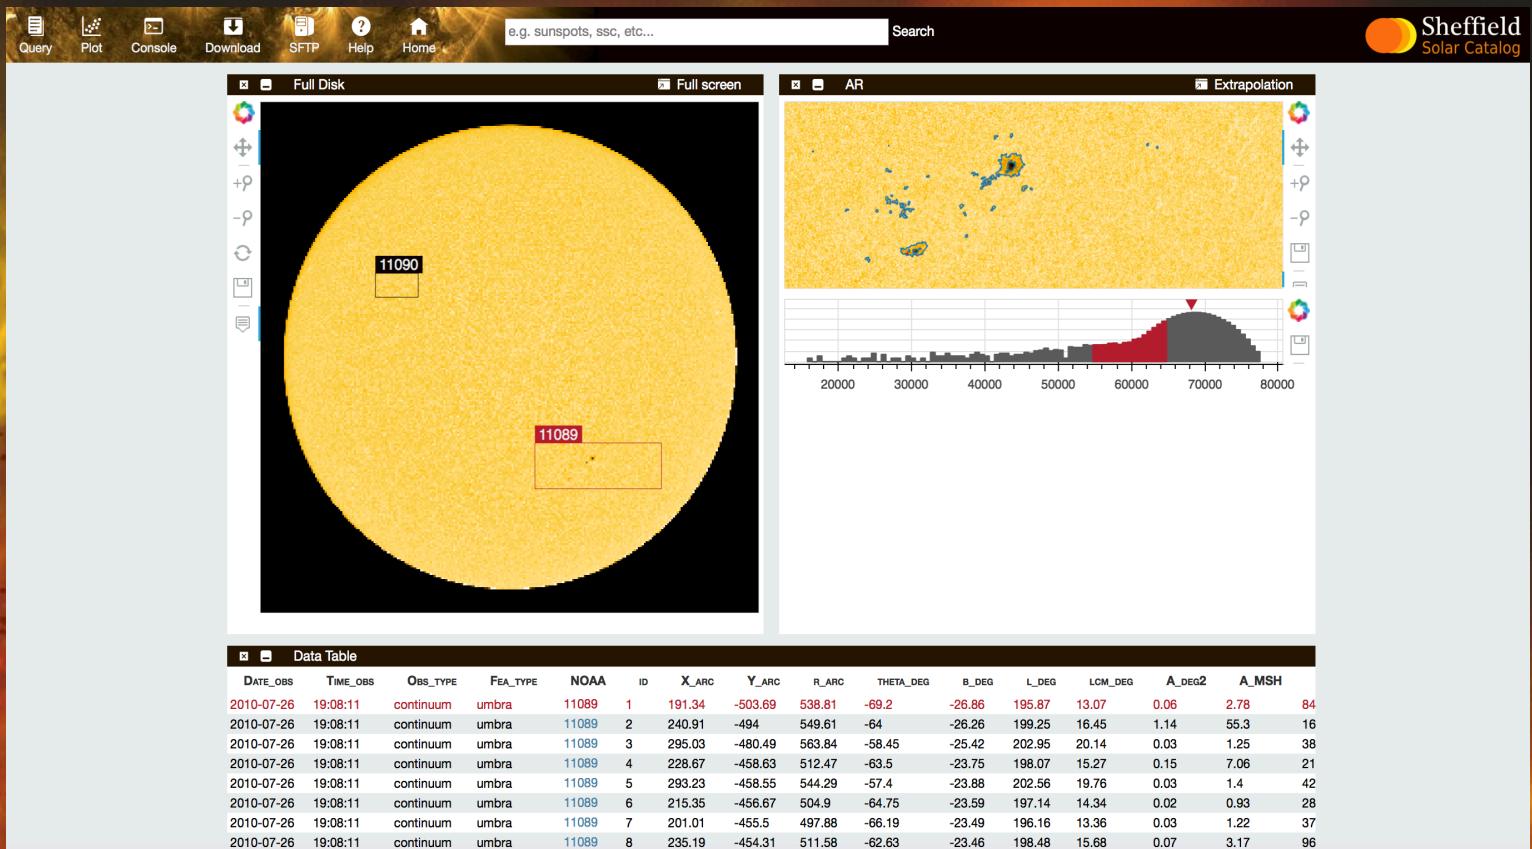

From 61 ARs with above M5 flare:

- estimate the expected largest flare intensity
- flare onset time estimation
- One or more flares?

WG_M method in the lower solar atmosphere

Korsós, M. B., et al. 2019, JSWSC

X2.2 flare at 01:56 on 15/02/2011

Automatic PIL recognition program
Horizontal gradient of the longitudinal magnetic field
is larger than $|50| \text{G/Mm}$

Synoptic solar telescope based on Magneto Optical Filter (MOF) technology: SAMM

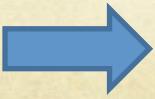

MOF technology

Dopplergrams
Magnetograms

Fixed wavelength but high stability and sensitivity

Synoptic

2 observation lines at 2 altitudes in the solar atmosphere:

Na D2 (600-700 km)
K I (300-400 km)

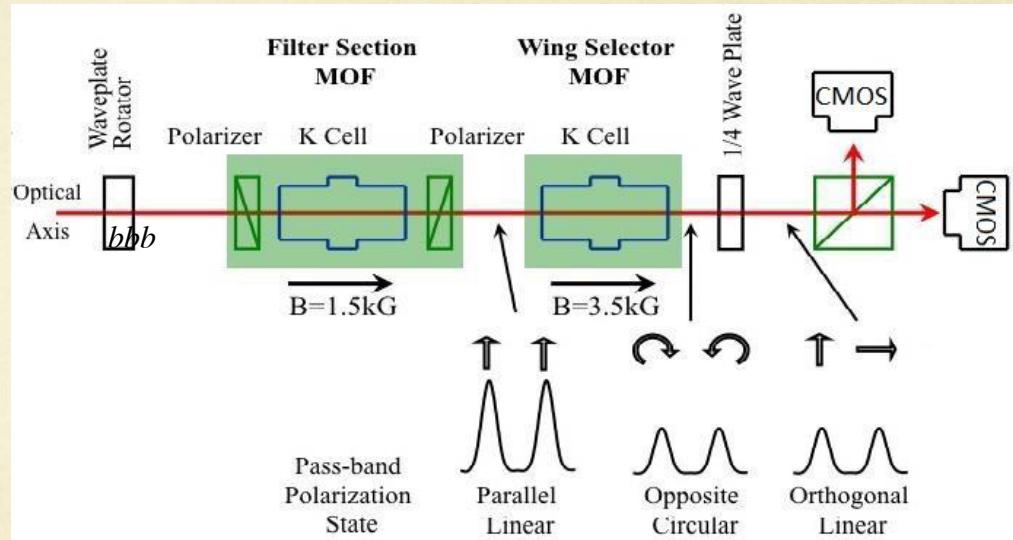

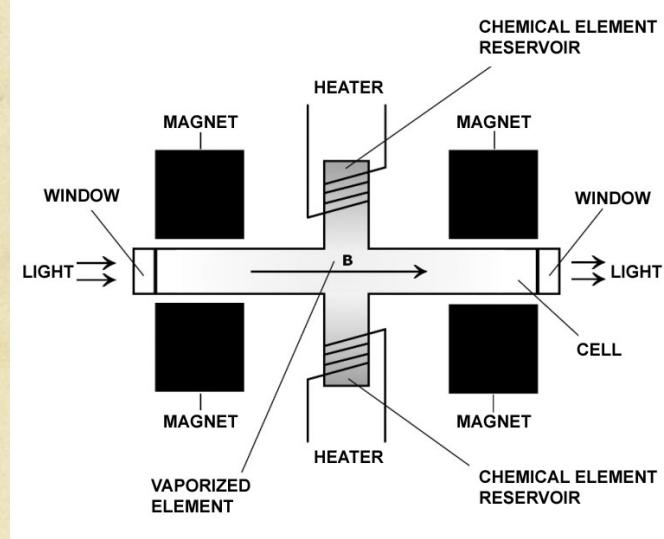

Future: Ca I (1000 km), He 1083

Full-disk or near-full-disk monitoring of solar activity

University
Of
Sheffield.

Synoptic solar telescope based on Magneto Optical Filter (MOF) technology: SAMM

$$B_{LOS} \propto (R^+ - B^+) / (R^+ + B^+) - (R^- - B^-) / (R^- + B^-)$$

Cacciani et al. 1990

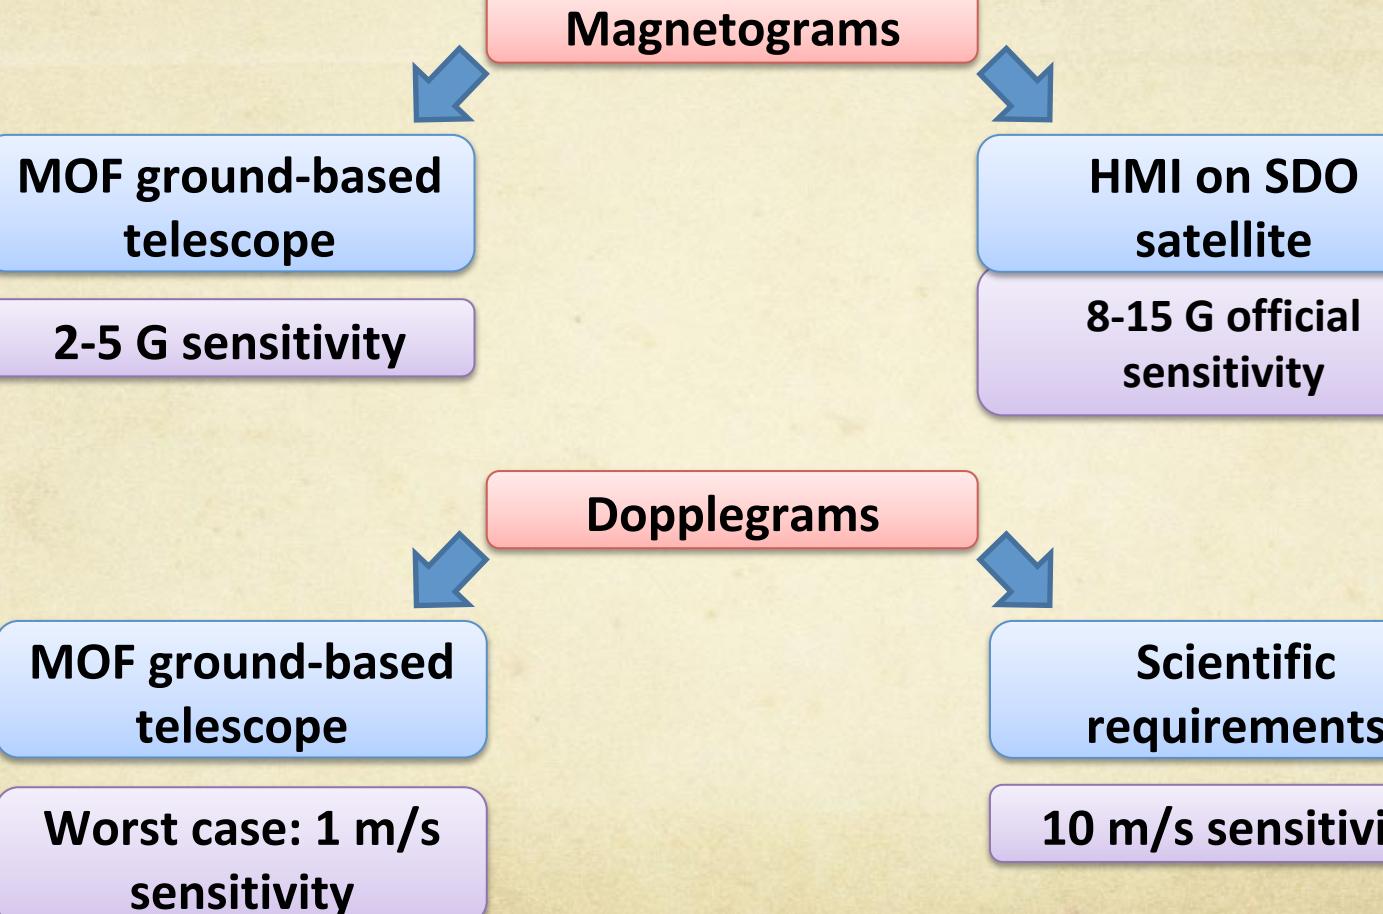

Stangalini et al. 2018

$$v_{LOS} \propto (R^+ - B^+) / (R^+ + B^+) + (R^- - B^-) / (R^- + B^-)$$

Heritage: Jeffries et al, MOTH I, MOTH II

Near Future

SAMM+:

4x observation lines at 4 altitudes in the solar atmosphere:
Na D2 (589 nm, 600-700 km)
K I (770 nm, 300-400 km)
Ca I (422 nm, 1000 km)
He 1083 nm (1900 km)
